

STREAMLINED SAFE DEPOSIT MANAGEMENT

SQN: Safe Deposit™

Eighty-four percent of bank executives think better fraud detection tools are needed at their institutions.*

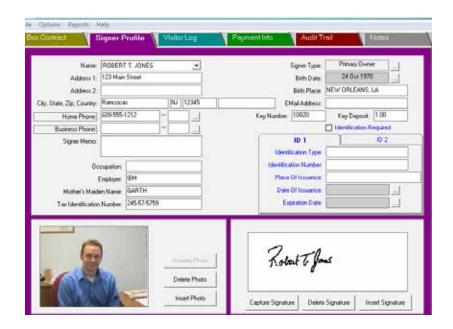

PROTECT CUSTOMERS AND SYSTEMS

Safe deposit boxes are known for protecting irreplaceable documents and precious valuables. Administration of safe deposit boxes, however, can be quite cumbersome and time consuming, especially if working with paper management systems. By implementing SQN: Safe Deposit™, all actions can be streamlined — including fraud detection — because of its unique technology.

SQN: Safe Deposit manages a bank's entire safe deposit operation. Upon client requests for access, entering just the safe deposit box number into the system will:

- display a screen for each authorized user
- · show photo identification and signature
- confirm if the account billing is current
- update the activity log to include that day's visit
- capture dynamic signatures with biometric data using signature pads

In addition to providing quicker and more secure service to customers, **SQN: Safe Deposit** saves time by quickly generating: invoices and late notices; visitor logs; waiting lists; box availability records and related costs; and box-income reports to show profitability.

SQN: Safe Deposit Features and Benefits

The technology of **SQN: Safe Deposit** modernizes everything to do with management of safe deposit boxes to:

- prevent access by unauthorized people
- offer faster service than manual methods
- provide automated billing and record keeping
- save space by eliminating signature card files
- reduce risk with electronic audit trail
- store scanned documents such as legacy contracts and visit logs for each box
- integrate easily with existing systems
